DETAILED ACTION

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Drawings

Figures 1(a), 1(b), 4(b), 8(b) and 9(b) should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to this Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-32 are allowable.

The following is an examiner's statement of reasons for allowance: Claims 1-32 are allowed over the prior art of record. The prior art fails to teach or suggest an architecture of a sigma delta modulation that integrates a quantizer swing reduction circuit (including a signal node V_x being coupled to input of a signal processing circuit block with a transfer function (H_3) and to input of a second signal processing circuit

block with a transfer function $(H_2 \cdot H_3)$ coupled between output of the quantizer (fourth summing node) and the input to the second integrator (third summing node), operable to keep the input/output swing of the quantizer within the limit of the finite quantization level.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited References

The prior art made of record and not relied upon is considered pertinent to application's disclosures. The cited references relate to circuit Sigma-Delta-Modulation for reducing quantizer.
